Research Overview

I am an accomplished atmospheric scientist and remote sensing expert with over a decade of experience at leading institutions such as the Indian Space Research Organization (ISRO) and NASA's Jet Propulsion Laboratory (JPL). My work focuses on utilizing advanced satellite remote sensing and ground-based observation technologies to unravel the complexities of atmospheric composition and its intricate interactions with the climate. Specializing in aerosol-cloud-radiation dynamics, my research aims to deepen our understanding of how these components influence global climate change. I possess expertise in developing state-of-the-art scientific retrieval algorithms, conducting in-orbit satellite and airborne calibration, and advancing multi-satellite data integration, validation of atmospheric and climate-related data products. My proficiency with a diverse range of satellite and airborne sensors allows me to address critical challenges related to aerosol-cloud interactions, air pollution, and climate variability across global regions. A natural collaborator and leader, I thrive in multi-disciplinary scientific teams, driving impactful research while fostering innovative solutions to some of the most pressing issues in atmospheric science. With a passion for pushing the boundaries of knowledge, I am dedicated to continuing my research into understanding the atmospheric processes that shape our planet's climate.

Research Interest

- aerosol-radiation-meteorological feedback
- aerosol-cloud-climate interactions and dynamical feedback
- satellite remote sensing and process studies of clouds
- multi-satellite data analysis
- vicarious calibration of satellites and radiative transfer
- air pollutant emission estimation from satellite

Education

- Gujarat University / Space Applications Centre, ISRO, Ahmedabad, India** [2014 – 2019]
Ph.D. in Physics (Atmospheric Science) (dissertation submission: Jan 2018 and defense: Aug 2018)
Topic: Investigation of aerosol-cloud microphysical interaction and associated changes in TOA radiative forcing using remote sensing data
- Indian Institute of Remote Sensing, ISRO, Dehradun, India** [2011 – 2012]
P.G. Diploma in Remote Sensing (Atmospheric Science)
- Sardar Patel University, Vallabh Vidhyanagar, India** [2009 – 2011]
M.Sc. in Condensed Matter Physics
- Veer Narmad South Gujarat University, Surat, India** [2006 – 2009]
B.Sc. in Physics

Professional Experience

- SRON - Netherlands Institute for Space Research, Leiden, Netherlands** [April 2024 – Present]
Scientist C
- Enhancing the innovative aerosol retrieval accuracy by developing the advanced quality filters for multiangle multi-spectral polarimetry data (i.e. PARASOL/POLDER, SPExone/PACE).
 - Retrieving cloud microphysical properties and cloud condensation nuclei (CCN) concentrations from the multiangle multispectral polarimetry data, improving insights into cloud behavior and climate effects.
- MethaneSAT LLC - a wholly owned subsidiary of EDF, Austin, Tx, USA** [Nov 2022 – March 2024]
Remote Sensing Scientist (Consulting)
- Conducting extensive research on global onshore and offshore oil and gas operations to characterize and quantify the emissions of multiple pollutant species, including NO_2 , SO_2 , PM2.5, black carbon, and formaldehyde.
 - Developing innovative methodologies to integrate current and future satellite data from multiple sensors, enabling comprehensive monitoring and analysis of pollutant emissions from oil and gas operations.
- NASA Jet Propulsion Laboratory, Caltech, Pasadena, CA, USA** [Sep 2019 – Sep 2022]
NASA Postdoctoral Program Fellow
- Developed an innovative algorithm to estimate cloud condensation nuclei (CCN) concentrations using spaceborne and airborne lidar measurements of aerosol optical properties.

- Conducted in-depth investigations into the variability of aerosol-CCN activity across diverse environments, employing advanced ground-based observation tools such as scanning mobility particle sizer, CCN counter, condensation particle counter, and aerosol chemical speciation monitor.
- Explored the profound impacts of aerosol-radiation-meteorological feedback within the boundary layer on smog intensification, leveraging observations from multiple platforms.
- Utilized a comprehensive suite of state-of-the-art atmospheric monitoring techniques, including satellite observations from renowned sources like MODIS, CERES, TROPOMI, CALIPSO, CloudSat, TRMM, along with radiosonde measurements, ground-based observations, and high-quality meteorological reanalysis datasets such as ECMWF and MERRA-2.

Physical Research Laboratory, Ahmedabad, India

[Jan 2018 – Sep 2019]

Postdoctoral Fellow

- Conducted an extensive analysis of various satellite observations to study the interaction between dust and ice clouds during the Indian Summer Monsoon.
- Evaluated the dynamic feedback resulting from dust-ice cloud interactions in different cloud regimes and their cumulative effects on precipitation patterns during the Indian Summer Monsoon. This analysis involved utilizing multiple satellite observations such as MODIS, MISR, CERES, CALIPSO, CloudSat, TRMM, as well as meteorological parameters from ground-based observations and reanalysis data.)

Space Applications Centre, ISRO, Ahmedabad, India

[Aug 2012 – Aug 2017]

Research Fellow

- Monitored and calibrated VIS/SWIR channels of geostationary satellites (e.g., INSAT-3D, INSAT-3DR) and the airborne hyperspectral sensor (AVIRIS-NG) to ensure accurate measurements.
- Validated level-2 geophysical products such as aerosol optical depth, cloud properties, precipitation, and meteorological parameters.
- Conducted comprehensive studies on atmospheric aerosols and their influence on the regional radiative budget utilizing in-situ observations and radiative transfer simulations.
- Developed and operated satellite CAL-VAL facilities and ground-based instruments (e.g., spectrometer, sunphotometer, micro rain radar, disdrometer, MicroTops) for precise calibration and validation.
- Formulated project goals, conducted ground-based field experiments, and analyzed data from diverse platforms (satellite, airborne, balloon-borne, ground-based) along with radiative transfer simulations.
- Produced detailed scientific reports, collaborated with the data team, and published research results in reputable journals and conferences.

In parallel with my professional endeavors, I dedicated myself to pursuing a doctorate focused on the intricate field of aerosol-cloud-radiation interactions. This research centered on leveraging satellite observations to gain profound insights into the complex interplay between aerosols, clouds, and radiation in the Earth's atmosphere.

Awards & Achievements

NASA Postdoctoral Program Fellowship NASA Jet Propulsion Laboratory	[2019]
Postdoctoral Research Fellowship Physical Research Laboratory	[2018]
Senior Research Fellowship Space Applications Centre, ISRO	[2014]
Junior Research Fellowship Space Applications Centre, ISRO	[2012]
Best Poster Presentation International workshop in Ansal University, Gurgaon, India	[2015]
Travel Grants ICTP (Italy), Department of Science and Technology (India), IIT-Delhi	[2015, 2016]

Invited Talk

Guest Lecture at ACAM Training School Dhaka, Bangladesh <i>Aerosol Monitoring from Satellites: A Comprehensive Overview</i>	[Jun 06, 2023]
SANGAM University Bhilwara, Rajasthan, India <i>Satellite Remote Sensing for Monitoring Climate Change</i>	[Sep 16, 2022]
University of Nizwa Oman <i>Atmospheric Aerosols in the Changing Climate from the Satellite Perspective</i>	[Apr 21, 2022]
S. V. National Institute of Technology Surat, Gujarat, India <i>Role of Atmospheric Pollution in Climate Change</i> <i>Training Program on Air pollution: sources, Control and Modelling</i>	[Feb 17, 2021]
P. P. Savani University Surat, Gujarat, India <i>How Human-Caused Air Pollution Changing Our Climate?</i>	[Jun 25, 2020]
Guest lecture at ACAM Malaysia <i>Satellite Remote Sensing for Monitoring Climate Change</i>	[Jun, 2019]
NASA Jet Propulsion Laboratory Pasadena, CA, USA <i>Strengthened Indian summer monsoon precipitation susceptibility linked to dust-induced ice cloud modifications</i>	[Oct 30, 2018]

Research Skills

- Experience in working/handling/reprocessing various **satellite datasets** (*MODIS, MISR, CERES, CALIPSO, Cloud-Sat, TRMM, TROPOMI, POLDER, PACE, AIRS, OMI, INSAT-3D, INSAT-3DR*) in **HDF/NetCDF** formats.
- Experience in working with various **ground-based observations, airborne datasets, and reanalysis data** (*ECMWF, MERRA for winds, planetary boundary layer height, vertical temperature profiles*)
- Modeling simulations with **radiative transfer codes** (*6S, SBDART*), **Mie Scattering Codes** (*bhmie, Wiscombe, T-matrix*), **OPAC, HYSPLIT**
- Experience in several **land and ocean-based field campaigns** both **independently** and in **collaboration with the team**.

Technical Skills

Programming: Python, Fortran, Generic Mapping Tool (GMT), Google Earth Engine, GDAL, CDO, bash scripting

Libraries: HDF, NetCDF

Applications: LaTeX, MS Office, Origin

Operating Systems: macOS, Linux, Windows

Experience in working on supercomputing platforms & Parallel Programming

Scientific Services

Member | AGU Atmospheric Science Early Career Committee

[2022-Present]

Proposal Panel Reviewer | NASA

Journal Reviewer: *Geophysical Research Letters, Environmental Research Letters, Atmospheric Chemistry and Physics, Remote Sensing of Environment, Remote Sensing, Atmosphere, Journal of Earth System Science, Journal of Applied Remote Sensing*

Professional Membership

American Geophysical Union (AGU), European Geophysical Research (EGU)

Research Projects
